Education

K.R. Mangalam University

B.Tech - Computer Science & Engineering(AI-ML)

Gurugram, Haryana

2023 - 2027

Experience

PSSTEC India Pvt. Ltd.

June 2026 – August 2026

Intern

- Developed a Leave Management System using React, JavaScript, REST APIs, and Power Apps, with Power Automate handling approval workflows and email notifications, to automate leave requests and status tracking.
- Built a Power BI dashboard to visualize leave patterns, department-wise utilization, and approval trends, helping HR and managers make faster, data-driven decisions.

Hitachi India Pvt. Ltd.

June 2025 – August 2025

Software Development Extern

- Architected backend services with Python web frameworks, integrating third-party booking APIs and streamlining reservation and confirmation workflows across 2 booking modules to reduce manual processing.
- Enhanced chatbot dialogue management for 10+ travel-related intents using Rasa, improving conversational accuracy and minimizing fallback responses.

Projects

AI Research Agent | Python, Streamlit, LangChain, Groq API, Tavily API

[Live](#) | [GitHub](#)

- Built an autonomous AI agent using LangChain and Groq API that iteratively searches and synthesizes cited research reports across up to 5 reasoning cycles per query.
- Deployed the agent as a full-stack multi-user Streamlit application with authentication and per-user data isolation.
- Designed an evaluation framework benchmarking the agent against 2 baseline approaches across 30+ test queries, measuring response time, citations, and failure rate.

AI Travel Chatbot | Python, Rasa, Django, HTML, CSS, JavaScript, REST APIs

[GitHub](#)

- Developed an intelligent conversational chatbot supporting 10+ travel-related user intents using Rasa NLU and custom dialogue management.
- Integrated external booking services with dynamic slot filling to deliver personalized itinerary recommendations and reservation support.
- Built a responsive web interface comprising 5+ booking and chatbot pages using Django, HTML, CSS, and JavaScript.

Churn Analysis and Retention System | Python, Pandas, Scikit-learn, Flask, HTML, CSS

[GitHub](#)

- Benchmarked four supervised machine learning models to identify the most effective approach for customer churn prediction using Scikit-learn.
- Investigated customer behavior by performing exploratory analysis on 500+ customer records to identify key retention factors.
- Created a Flask dashboard to visualize predictions from 4 machine learning models for customer churn analysis.

Technical Skills

Languages: Python, Java, JavaScript, HTML, CSS

Frameworks & Libraries: Django, Flask, Streamlit, LangChain, Pandas, NumPy, Scikit-learn, Rasa

Databases: MySQL, MongoDB

Developer Tools: Git, GitHub, Visual Studio Code, Postman, Power BI, Jupyter Notebook,

Concepts: DSA, OOPs, DBMS, REST APIs, Machine Learning, LLM Integration, Agentic AI

Certifications

- Data Analysis with Python – IBM
- Mastering Machine Learning
- Neural Network and Deep Learning
